

# Save Windows PowerPoint 2016 presentations as PDF files

Select **File > Export**.

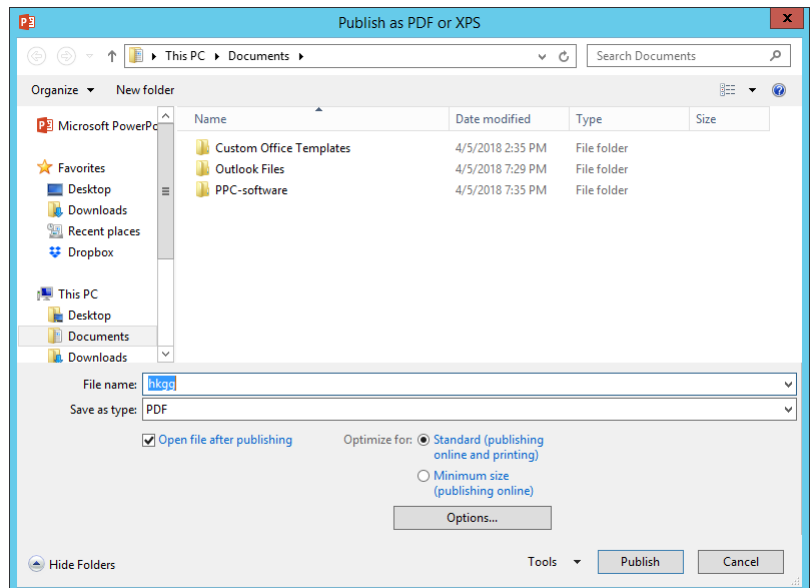

Save a presentation as **PDF**

Click Create **PDF/XPS Document**, then click **Create PDF/XPS**.

In the **Publish as PDF or XPS** dialog box, choose a location to save the file to. If you want it to have a different name, enter it in the File name box.

At Optimize for, select **Standard** for higher quality (for printing). Don't select Minimum size, this makes the file smaller (for example, if you want to send it as an e-mail attachment).

Click **Options** to set how the presentation will appear as a PDF. Here are some of the available options:

To save the current slide only as a PDF, under Range, select Current slide.

To save specific slides as PDF, in Slides(s), enter the slide number range in From and To boxes.

\* Do not save comments, handouts, or Outline view.

\* Do not include frame slides, hidden slides, comments, ink, non-printing information such as Document properties or Document structure tags, in your PDF.

**Click OK.**

**Click Publish.**
